

HEBREW SPECIFIC FEATURES AND SETTINGS

There are a number of settings available and the right settings depend on your aim and how fluent you are. You can access the settings by selecting “Keyboard Settings” from the menu:

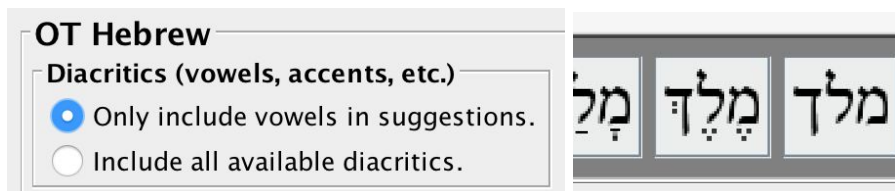

Diacritics (vowels, accents, etc.)

Our corpus includes not only niqqud but also less common diacritics such as meteg, upper and lower punctum, etc. If you'd like to have these showing in your results, select “Include all available diacritics.”

If you would like them excluded from the results, select “Only include vowels in suggestions.”

Suggestion Format and Matching Method

If you know a little bit of Hebrew and would like help finding the word you want to type without having to sift through a lot of similar forms, we recommend the following: set the Suggestion Format to “Only include consonants” and the Suggestion Matching Method to “All words beginning with the typed consonants” (see below). Then your suggestions will only contain consonants, but if you right-click on a suggestion you'll see the options with vowels. Click on the word from the drop-down to type it.

Suggestion Format

☐ Show consonants and diacritics (vowels, etc.)

☒ Consonants only & right-click to see vowels, etc.

Suggestion Matching Method

☒ All words beginning with typed consonants.

☐ Words with only the typed consonants.

☐ No suggestions.

If you're fluent and just want to be able to type as quickly as possible, or you just want to be able to use Vervoco Desktop in the way you have previously, then set Suggestions Format to one of the 1st two options (accents refer to marks such as meteg) and set Suggestion Matching Method to "All words beginning with the typed consonants."

Suggestion Format

☒ Show consonants and diacritics (vowels, etc.)

☐ Consonants only & right-click to see vowels, etc.

Suggestion Matching Method

☒ All words beginning with typed consonants.

☐ Words with only the typed consonants.

☐ No suggestions.

The other options under Suggestion Matching Method are for when a teacher (or student) would prefer a little less help in the early stages of learning the language. The student will be forced to remember the spelling, but will still have the benefit of a visual keyboard.

Suggestion Fonts

The fonts just change how the suggestions appear within the app. Of particular note, the location of a holam in relation to a vav is different.

David Taamim Font:

Pasting from Elsewhere

We've just added this feature: Copy a consonantal form of a single word from a webpage or document, and right-click in the suggestion area of the Vervoco Desktop on-screen keyboard. Select paste. You'll

see suggestions with vowels, just as if you had typed the consonants in Vervoco Desktop. Click the suggestion to type it.

בראשית 1:1

ברא אלהים את השמים ואת הארץ
